

AMBIANCE SALON & SPA

POST PROCEDURE CONSENT FORM

Please read and **INITIAL** the statements below to indicate: I understand the following completely.

_____ Color will appear darker and bolder after the procedure. Your color will oxidize and darken over the first few days. The color can and will fade/soften anywhere from 10% to 50% or more. This is a normal and expected result of the application and healing process.

_____ Some residual swelling is normal for ALL procedures. Swelling and healing time is individualized. Every client is different. Blanching (whiteness around the treatment area) and redness is to be expected and can vary from client to client. It can last a few hours to a few days.

_____ The area may appear uneven, dry, itchy, tender, and irritated. This is all 100% normal. **Do not pick.** These symptoms will dissipate each day and vary on an individual basis.

_____ Picking can lift color and pigment from the treated area resulting in unevenness and blank spots. Let the brows flake off naturally.

_____ During the exfoliation process your color may look uneven, weak, orangey, pinkish, or grey. This will NOT be your final result. It takes a full 6-8 weeks or more for your true color to resurface. If at that point, it is not healed perfectly, don't worry! We can always go darker and add more density at your next appointment.

_____ Healing is specific to each client. It is important to realize that you will need a color refresher every 2 years to maintain its fresh natural appearance. Fading WILL happen after each procedure.

_____ It is very common to have areas fade more so than others. This is part of the healing process and it may be treated at the recommended touch-up appointment. Previously done eyebrows may take 1-3 treatments to achieve the desired result. Scar tissue in the brow area of eyebrows done multiple times WILL require additional procedures and fees will apply.

_____ Everyone's genetics, make-up, and lifestyle will affect the treatment in various ways. You may still need to powder and/or pencil your eyebrows even after the healed results. This is an enhancement to your natural brows, as it is a semi-permanent tattoo and not a permanent one.

_____ If you are out in the sun a lot, have oily skin, use anti-aging creams, Retin-A/retinol products, acidic cleansers, natural elements, regular chemical peels, or exercise frequently, your permanent makeup WILL fade prematurely. The better you take care of the treated area and follow the provided aftercare, the longer it will last.

_____ Remember, that no two sides of the face are the same or perfectly symmetrical. While trying to obtain perfect symmetry is our goal, note that nothing is perfect. When you leave the studio your shaded eyebrows and/or your hair strokes are intact. Remember your technician will do their best to help you heal properly but lifestyle,

genetics, age, and certain environmental factors can/will contribute to the retention of your eyebrows.

_____ The use of makeup such as a brow pencil or powder may still be needed. This is not a “no maintenance” treatment but a “low maintenance” one. If you decide to change your mind and switch to a have powder-filled/ombre/shaded eyebrow procedure after your first hair stroke/microblading procedure and do not want to do hair strokes for your follow up appointment, you will be charged accordingly for the change of service. You will/may also be charged a “set-up” fee for your 3rd follow up because the service performed has been changed.

_____ Follow up visits MUST be done within 6 - 8 weeks after your initial treatment in order to receive free touch-up. Any additional touch up's with in 6 - 12 months are an additional charge. We do not do free touch-ups after your follow up visit but will price accordingly to your individual needs.

_____ I have read and understood the risks to this procedure. I have read an understood the aftercare protocols after my treatment and to follow the aftercare instructions.
